# How your project is graded — NLP course 2026/27

This is the full list of criteria we use. Nothing is graded that is not on this list.

Each criterion is scored on three levels only: full (present, complete, understandable without the presentation) · half (present but incomplete or vague) · 0 (absent or unverifiable). §5a below is the exception — it is scored per question, not full/half/0 (see that section).

Read this together with the Rules document. Phase 1 = 10 pts, phase 2 = 20 pts, phase 3 = 30 pts, survey presentation/tutorial = 10 pts, tutorial exercises = 25, Q&A questions – up to 10 points. Core total = 105, plus an optional bonus (below) up to +5.

## Phase 1 — literature review, datasets, solution concept (10 pts)

| # | Criterion | Pts | Full credit means |
|---|---|---|---|
| 1.1 | **State of the art** | 3 | At least 15 works, each with what it does, on what data, with what result. A table comparing published numbers, with the dataset and split named for every number. |
| 1.2 | **Datasets and their status** | 3 | Every dataset: size, label definition, class balance, licence, how obtained. Labelled READY / TO COLLECT / RESTRICTED. If TO COLLECT: how many items, by when, annotated by whom. |
| 1.3 | **Solution concept and experimental plan** | 2 | Pipeline in one figure, metrics chosen before results exist, 2–3 concrete success deliverables. Week-by-week plan with named owners. |
| 1.4 | **Text quality and references** | 1 | Scientific language, no unexplained abbreviations. Cite the published version of every work that has one; preprint-only citations under one third of the list. |
| 1.5 | **Data statement (new)** | 1 | Where the data comes from, licence, whether it contains personal data, and what you do about it. Six lines are enough. |

## Phase 2 — revised review, proof of concept, EDA (20 pts)

| # | Criterion | Pts | Full credit means |
|---|---|---|---|
| 2.1 | **Working PoC with first result** | 4 | Pipeline runs end to end on real data, produces a number. A number with no code, or code with no number, is half. |
| 2.2 | **Exploratory data analysis** | 3 | Label/length distribution, duplicates, leakage check between splits, comparison with at least one other dataset (or a sentence why not). |
| 2.3 | **Experiment plan and settings** | 3 | Baselines from at least two different method classes (classical / fine-tuned encoder / prompted LLM), hyperparameters, splits, what you measure. |
| 2.4 | **Rebuttal to the supervisors' reviews and Q&A questions** | 3 | Every point answered: fixed, rejected, or deferred — from both the supervisors' written reviews and the questions your team received in the meeting #8 Q&A session. Each answer names the specific place in the report it applies to (section/table/figure), is checkable, and — where the point was accepted — states the concrete fix, not just an acknowledgement. A list of remarks with no answers, or answers that only restate the remark, is 0. |
| 2.5 | **Revised state of the art** | 2 | Phase-1 table extended with reviewer input and PoC-stage findings. |
| 2.6 | **Repository and README** | 2 | A stranger reproduces one result from the README alone. |
| 2.7 | **Runtime and memory** | 1 | Training and inference time, hardware, memory — measured, not estimated. |
| 2.8 | **Contribution table (required to pass)** | 1 | Named tasks and hours consistent with repository history. Missing table = report not accepted for grading, in every phase. |
| 2.9 | **Text quality and references** | 1 | As 1.4. |

## Phase 3 — final report (30 pts)

| # | Criterion | Pts | Full credit means |
|---|---|---|---|

| | | | |
|---|---|---|---|
| 3.1 | **Results with analysis and discussion** | 4 | All results in tables/figures, compared across method classes and datasets, each referenced and interpreted. |
| 3.2 | **Measurement procedures** | 3 | Exactly how each number was produced: metric, aggregation, thresholds, handling of ties/failures. |
| 3.3 | **Reproducibility** | 3 | Seeds, versions, configs, commands, data version — another team runs your best experiment unaided. |
| 3.4 | **Rebuttal to all reviews and Q&A** | 3 | As 2.4, for every review and every Q&A question received since Phase 2, including the meeting #13 final Q&A. |
| 3.5 | **Final presentation** | 3 | See presentation criteria below. |
| 3.6 | **Uncertainty of results** | 2 | ≥3 runs with spread reported (std/CI), or a stated reason this is impossible. Conclusions consistent with the spread. |
| 3.7 | **Error analysis** | 2 | ≥20 misclassified examples, grouped into named error types with counts and implications. |
| 3.8 | **Solution and experimental setting** | 2 | Final pipeline, deviations from the plan stated and justified. |
| 3.9 | **Revised literature review** | 1 | Final state including anything published while you worked. |
| 3.10 | **Limitations** | 1 | What your result does NOT show, each with a stated consequence. |
| 3.11 | **Data statement** | 1 | As 1.5, updated to what was actually used. |
| 3.12 | **Metric choice** | 1 | Why these metrics for this label distribution. Rare positives: accuracy alone is 0. |
| 3.13 | **References** | 1 | As 1.4. |
| 3.14 | **Language and editorial quality** | 1 | Scientific, consistent, proofread. |
| 3.15 | **Captions** | 1 | Every figure/table understandable without surrounding text. |
| 3.16 | **Code quality** | 1 | Clean, runnable, README kept current. |

## Presentation and tutorial — §5c (10 pts)

| # | Criterion | Pts | Full credit means |
|---|---|---|---|
| P1 | **Slides and delivery** | 4 | Problem, data, method, results, limitations — in order, in time. One message per slide. |
| P2 | **Short quiz** | 2 | 3–5 questions on your topic the audience can answer after your talk. |
| P3 | **Demonstration notebook** | 4 | Runs top to bottom in under 10 minutes, shows the main concept on a small example. |

## Tutorial exercises — §5d (20 pts)

> The format of the mid-term test (5d.1) will be announced in class. Notebook exercises (B.1) are an optional bonus and are not part of the 100-point core.

| # | Criterion | Pts | Full credit means |
|---|---|---|---|
| 5d.1 | **Mid-term tests (format TBC)** | 10 | Task-relevant questions completed individually, on schedule. Exact format — written test, take-home, in-class quiz — not yet decided. |
| 5d.2 | **Annotation exercise participation** | 10 | Ties to Meeting #7 (data annotation training): guidelines followed, independent double-annotation completed, agreement (κ) computed and reported. |
| 5d.3 | **Discussion participation:bonus points** | +5 | Substantive contribution to in-class discussion, evidenced (not just attendance). |

# Bonus — up to 5 extra points (not part of the 100-point core)

| # | Criterion | Pts | Full credit means |
|---|---|---|---|
| B.1 | **Notebook exercises** | +5 | Weekly lab notebook tasks completed and runnable end to end. Counted on top of the core total; does not raise the pass/fail thresholds, which stay defined against 100. |

# Q&A questions — §5a (up to 10 pts)

Source (Schedule document): "1 unique reasonable question = 1 point, up to 10 points." This is scored per question, not full/half/0 — asked during the mid-term (meeting #8, 25.11) and final (meeting #13, 13.01.2027) Q&A sessions, where every student prepares questions for other teams' presentations.

| # | Criterion | — | Full credit means |
|---|---|---|---|
| 5a.1 | **Unique** | — | Not a repeat, in substance, of a question another student already asked in the same session. A rephrasing of an already-asked question does not earn a second point. |
| 5a.2 | **Reasonable** | — | Addresses the presented work itself — its method, data, results, or claims. Off-topic questions, or questions answerable from the slides just shown, do not count. |

1 point per question meeting both conditions, capped at 10 points for both Q&A sessions.

# Deductions and conditions for acceptance

Late submission: one delay of up to 48h per semester with no penalty. Every further delay: −5 pts on that phase.

Wrong template: −5 pts, once per phase, and you resubmit in the correct template.

Two elements are conditions of acceptance, not scored criteria — a report missing either is not graded at all until added:

Missing LLM-use declaration: the report is not accepted for grading until added.

Missing contribution table: the report is not accepted for grading until added, in every phase (1, 2 and 3). An unaccepted phase scores 0; since 30 of 60 project points are needed to pass, a missing table in two phases makes the course unpassable.

Wrong submission folder naming: every milestone must be placed in a folder named surname_surname_surname_surname (all team members, from the Rules document). The order set at Milestone 1 must not change for the rest of the semester. Non-compliance: −5 pts, and the submission is not accepted for grading.

# Self-check before you submit

[ ] Contribution table, one row per person, with hours — without it the report is not accepted, in every phase

[ ] LLM-use declaration — same rule

[ ] README that lets a stranger run one experiment

[ ] Runtime and memory measured and reported

[ ] Every number in every table says which split it comes from

[ ] Every preprint checked for a published version

[ ] Data statement present

[ ] Rebuttal answers every review point AND every Q&A question, at a named place, checkably

[ ] Correct template, submitted on time

[ ] Folder named surname_surname_surname_surname, same order as Milestone 1
